

The Value of a Docker Subscription

Enable digital transformation for your applications, without lock-in, with a subscription from Docker.

Meet Docker Enterprise Edition (EE)- The Container Platform for Digital Transformation

The Docker EE subscription delivers the enterprise container management platform that challenges the status quo of vendor lock-in. The platform is designed to give you the security, flexibility and peace of mind you require to enable digital transformation and modernize all your applications.

Here's What You Receive

With a Docker subscription you gain access to the world's most trusted container management platform, complete with security, support, a certified ecosystem, long-term stability and infrastructure choice.

Security and Compliance

A Docker Subscription will give you access to the strongest, secure by default container platform on the market. This ensures that your applications are protected and that you can more easily comply with industry regulations. You'll have safer applications, now matter where they are running and can rest assured that your applications are secured as the move through your software supply chain and across infrastructure.

Support from The Source

We're in this together. The subscription comes with direct support from the Docker Support team, with dedicated service levels and backed by the engineering team that created Docker. This eliminates the worry of having to spend time solving untimely issues yourself. It also gives you hotfixes, security patches and updates to the Docker platform.

Trusted and Certified Ecosystem

Ecosystem technology extends and complements a platform. Docker EE you not only get an enterprise grade container platform but certified technology for the environment. This ecosystem is comprised of certified containers and certified plugins available on infrastructure certified by Docker. These technologies are delivered as containers built with best practices for security and cooperative support to ensure the environment runs smoothly.

Long-term Stability and Predictability

We realize as enterprises it can be difficult to keep up with rapidly changing technology. This subscription allows your to work within the timeline that works best for your application lifecycle. It marches to a quarterly release cadence and carries a one year maintenance window. It also includes a three release support policy giving you full support for the current Enterprise Edition version plus the three previous versions as well. This means that your team doesn't have to update your version each quarter.

Choice of Infrastructure

No one enjoys being locked into a single infrastructure type or OS. This subscription offers you the flexibility that made Docker popular, the ability to leverage any infrastructure that works best for your business. The Docker EE platform can be deployed onto any infrastructure type including bare metal, virtual machines or cloud allowing you to leverage the same docker platform across different infrastructure and full portability for your applications across them. This choice frees you from infrastructure lock-in, allows you to use your resources efficiently, reduces costs associated with maintaining applications and allows you to optimize the use of expensive incumbent infrastructure.
